Subject: 10/070,882

Please ask Ms. Beverly Shears to perform this search.

In application 10/070,882, please perform a search for the following claims. Please include an inventors' name search for Richard William Titball and Helen Lisa Bullifent.

Claim 1. A method of enhancing expression of a desired homologous or heterologous protein (polypeptide) at mucosal effector sites of a mammal comprising placing a nucleotide sequence encoding the protein to be expressed under the control of a promoter having the nucleotide sequence of SEQ ID NO: 2 in a recombinant gut-colonising microorganism (e.g. *Salmonella typhi*, *Salmonella typhimurium*, *Vibrio cholerae*, *Escherichia coli*, *Shigella*), administering the microorganism to the mammal, and causing expression of the desired protein in mucosal cells.

Claim 2. The method of claim 1 wherein the protein is of *Yersinia pestis*.

Claim 3. The method of claim 2, wherein the *Yersinia pestis* protein comprises the F1-antigen.

Thanks.
